

DBSE WEEK 7 using mongo DB

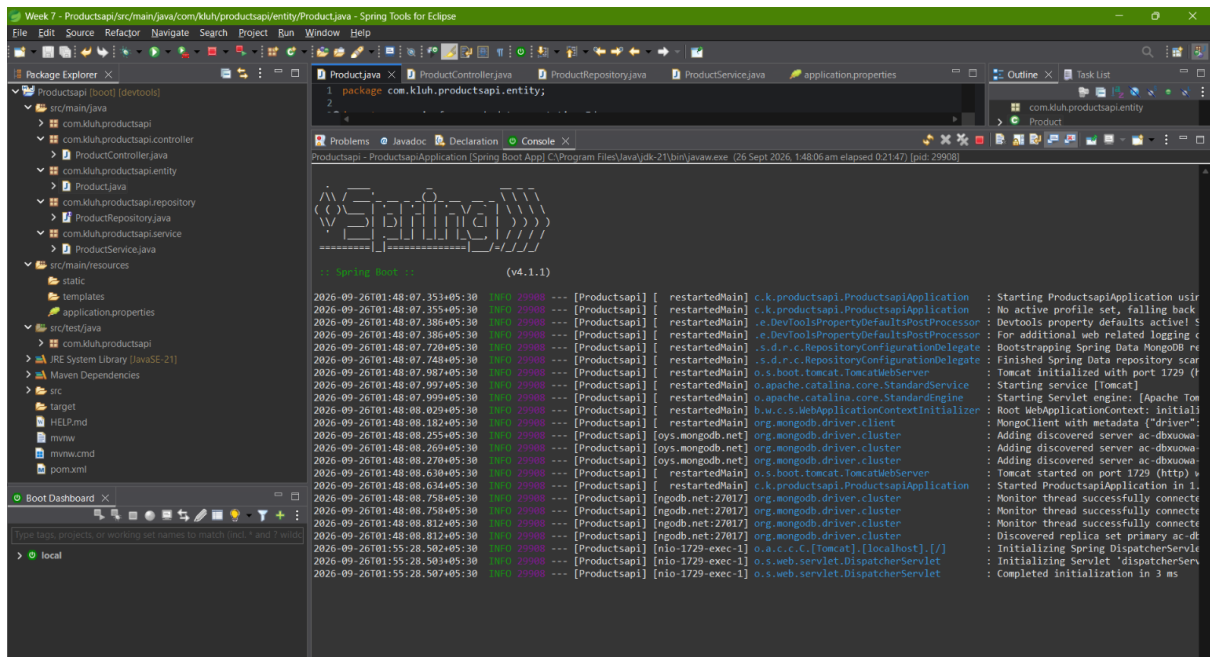

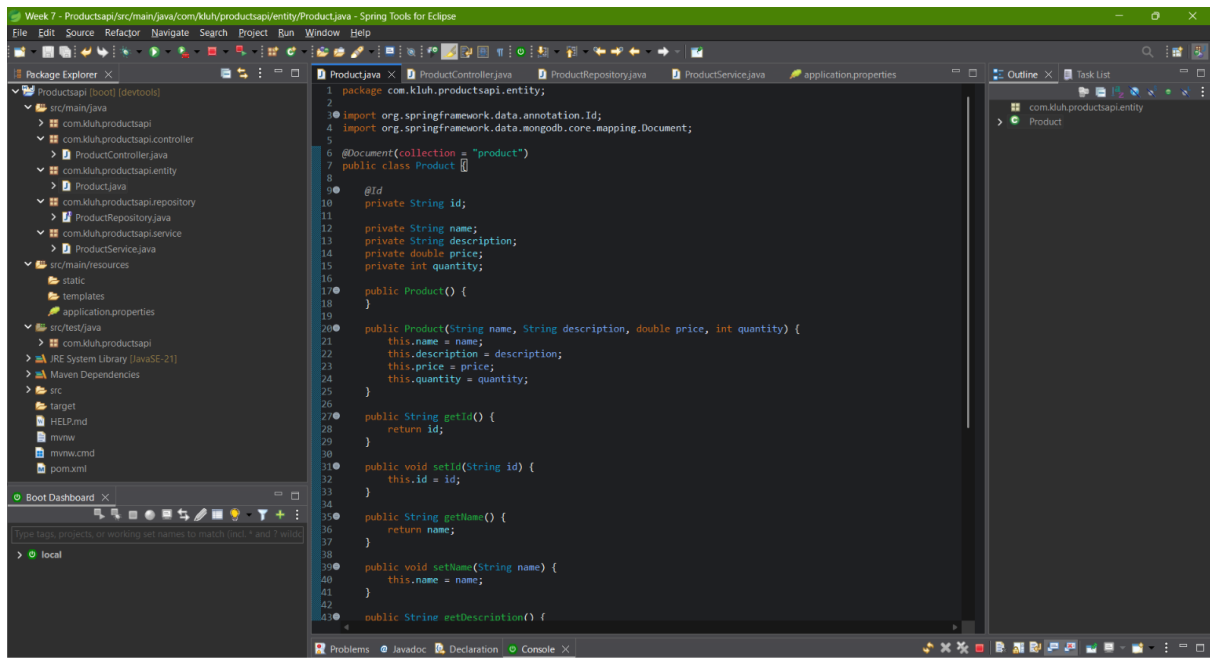

ARNAV CHITIKENA

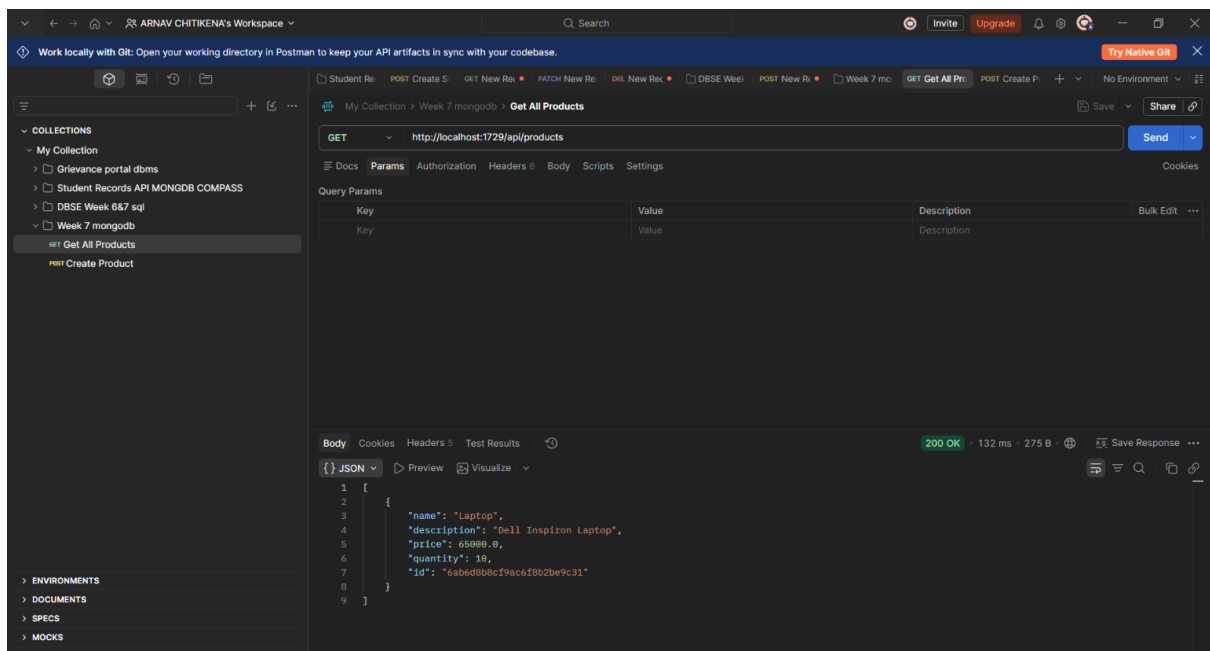

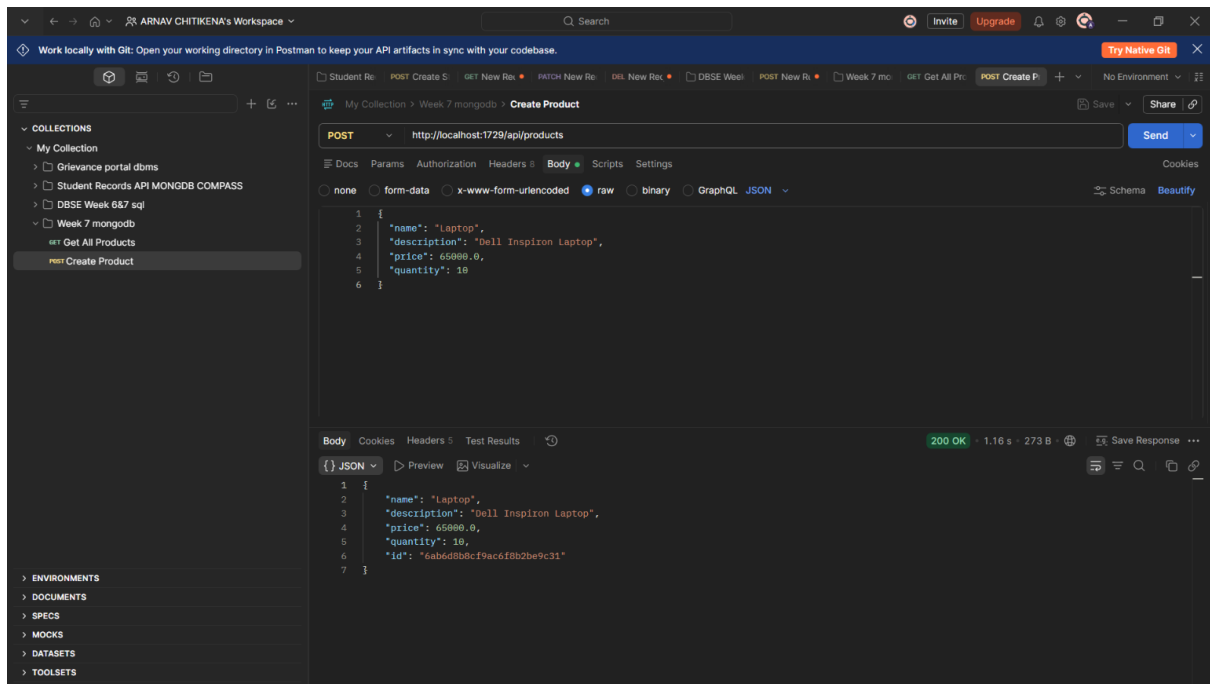

Execution

1. Created the **Spring Boot Products API** using the Controller, Service, Repository, and Entity layers.
2. Configured **MongoDB Atlas** as the database and connected the application successfully.
3. Started the Spring Boot application on **port 1729**.
4. Tested the **POST /api/products** request using Postman and successfully inserted a product.
5. Tested the **GET /api/products** request and successfully retrieved the stored product.
6. Verified the kluh → product collection in **MongoDB Atlas**, confirming that the product was stored successfully.

```
1 package com.kluh.productsapi.controller;
2
3 import java.util.List;
4
5 import org.springframework.web.bind.annotation.GetMapping;
6 import org.springframework.web.bind.annotation.PostMapping;
7 import org.springframework.web.bind.annotation.RequestBody;
8 import org.springframework.web.bind.annotation.RequestMapping;
9 import org.springframework.web.bind.annotation.RestController;
10
11 import com.kluh.productsapi.entity.Product;
12 import com.kluh.productsapi.service.ProductService;
13
14 @RestController
15 @RequestMapping("/api/products")
16 public class ProductController {
17
18     private final ProductService productService;
19
20     public ProductController(ProductService productService) {
21         this.productService = productService;
22     }
23
24     @PostMapping
25     public Product addProduct(@RequestBody Product product) {
26         return productService.saveProduct(product);
27     }
28
29     @GetMapping
30     public List<Product> getAllProducts() {
31         return productService.getAllProducts();
32     }
33 }
```
