Project Abstract Submission Form

Sec No-2	Team No-25	Project Title - Grievance Redressal Portal for Institutions
----------	------------	---

1. Abstract

Grievance Redressal Portal for Institutions is a web-based system designed to provide a centralized, transparent, and efficient platform for managing grievances raised by students and other institutional users. In many educational institutions, complaints related to academics, infrastructure, information technology, examinations, hostel facilities, transportation, and other campus services may be handled through manual or disconnected processes, making it difficult to track complaints, assign responsibilities, and monitor their resolution.

The proposed portal aims to simplify this process by providing role-based access for students, staff, and administrators. Students can securely log in, submit grievances by selecting appropriate categories and priorities, and track the status of their complaints. Staff members can view grievances assigned to them, update their progress, and provide responses or resolutions. Administrators can monitor all grievances, assign complaints to appropriate departments or staff, manage users and categories, and analyse grievance statistics.

The system will use React.js for the frontend and Node.js with Express.js for backend development. MongoDB Atlas will be used as the NoSQL database, while Mongoose will provide schema modelling and database interaction. REST APIs will facilitate communication between the frontend and backend. MongoDB features such as document-based storage, CRUD operations, querying, indexing, and aggregation can be utilized to efficiently manage grievance data. These technologies align with the course emphasis on MongoDB, Mongoose, Node.js/Express, and REST-based backend development.

The proposed system aims to improve accessibility, accountability, transparency, tracking, and timely grievance resolution within institutions.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030331	ARNAV CHITIKENA	
2520030573	HARSHITH MADDINENI	

3. Frameworks / Platforms / Software Used

React.js, Node.js, Express.js, MongoDB Atlas, Mongoose, REST APIs, VS Code, Postman, Git & GitHub.
